Investment Selection and Management Process

Investment ideas are generated by Aquila FCR founders and decided by the Fund Investment Committee.

If long-term interest rates rise, the value of the fund's units is likely to fall. The value of the Fund's portfolio is subject to fluctuation and past performance is not necessarily a guide for future performance. The reported Fund performance is calculated for the portfolio and the actual individual investor performance will differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Fluctuations or movements in Exchange rates may cause the value of the Fund's investments to go up or down. Do remember that the value of the Fund's investments and the income generated from them may do down as well as up and is not guaranteed, therefore you might not get back the amount originally invested and potentially risk total or partial loss of capital. Therefore, the Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The Fund is a medium to long term investment. A Schedule of fees and charges and commissions is available on request free of charge from the Manager.

Monthly commentary

Portuguese Economy

The Portuguese economy grew 2.3% in 2023, marginally above the government forecast.

Despite the slowdown in growth, which included a quarter - the 3rd - of contraction, unemployment remained stable, with the year ending with an unemployment rate of 6.5%. Inflation fell progressively, settling at just 1.8% at the end of the year.

Public accounts closed with a surplus of 0.8%, the largest of the century, after a deficit of 0.3% in 2022. The cumulative effect of the budget surplus and inflation made it possible to end the year with public debt below 100% of the Gross Domestic Product, an extraordinary feat, since a similar value had only been recorded in 2010 (100.2%).
